Relevant. Evidence of Makaton for all primary school age groups, not just EAL</b> "The findings suggest that Makaton can assist in the development of talk, as the data showed a positive correlation between the use of Makaton and the use of spoken English. This study has implications for practitioners and schools, not only those catering for the specific needs of EAL learners because Makaton is a skilfully devised programme that is underpinned by the very principles that are documented to support pupils who have EAL."
